

# AWS Automation with boto3 of Python and Lambda Functions

## Introduction to boto3

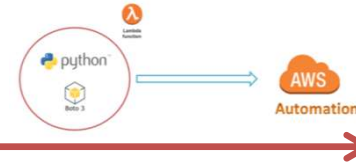

*Learn how to automate AWS common tasks using boto3 and Lambda*

# Introduction to boto3

- Boto3 is the name of the Python SDK for AWS.
- Boto3 allows us to directly create, update, and delete AWS services from our Python scripts.
- Boto3 is built on the top of botocore module.
- We have to Install boto3 to work with AWS Services using Python Scripts.
- How to install boto3 ?
  - Python-2.x:
    - `pip install boto3`
  - Python-3.x
    - `pip3 install boto3`

*Learn how to automate AWS common tasks using boto3 and Lambda*

## Boto3 Session Concept:

- There are two types of Sessions
  - They are:
    - Custom Session
    - Default Session
